Considerations in Selecting a Pressure Gauge

RANGE

The maximum operating pressure should not exceed 75% of the full-scale range. The normal operating range should be in the middle half of the range (between 25% and 75% of the full-scale range); whenever possible.

DIAL SIZE

Select a dial size that allows you to comfortably read the dial from the normal distance when installed.

PRESSURE SYSTEM MATERIAL

The media to which the gauge will be subjected is critical to the selection of the proper material for the Bourdon tube, bellows, and socket.

Weksler models are offered with:

- Phosphor bronze Bourdon tube (or bellows) with brass sockets.
- 316 stainless steel Bourdon tube (or bellows) with 316 stainless steel sockets.
- 316 stainless steel Bourdon tube with alloy steel sockets.
- Monel Bourdon tubes with Monel sockets.

For applications where the above materials may not be suitable, a diaphragm seal will be necessary to protect the pressure gauge system.

ACCURACY

Select a gauge with the desired accuracy as follows:

- $\pm\frac{1}{4}\%$ – Test gauges only (not for in-line service)
- $\pm\frac{1}{2}\%$ – Weksler Royal gauges (4 $\frac{1}{2}$ " dial size and larger) and Weksler digital gauges (2 $\frac{1}{2}$ " case size)
- $\pm 1\%$ – Weksler Regal gauges, 100 MM Gauge, EA14 gauge
- $\pm 2\text{--}1\text{--}2\%$ – Weksler duplex, differential and low pressure gauges
- $\pm 3\text{--}2\text{--}3\%$ – Weksler BY12, BY42, UA15, UA20, UA25, UA35 series utility gauges

MOVEMENT

Select either a gauge with 300 series stainless steel movement for long wear or a gauge with bronze or brass movement for applications where vibration and pulsation are not present.

CASE

A wide variety of case styles and materials are offered. Determine how the gauge is to be mounted: direct, surface (wall) or flush (in panel). Determine the desired case materials: polypropylene (or phenol); aluminum (black enameled) or stainless steel (300 series).

Determine case type:

Safety
(solid front with blow-out back)

Standard
(open front with rubber blow-out disc at rear)

Note – All safety case styles are designated by a number. Standard case styles are designated by a letter.

WINDOW

A glass face is standard in most gauges. If breakage is a concern, a plastic or shatterproof glass face is optional at extra cost on most Weksler Royal and Regal gauges. (Glycerin filled and sanitary gauges have plastic face as standard).

POINTER

All Weksler gauges (except utility types) have adjustable pointers. This permits pointer repositioning during calibration check or allows maximum precision at a specific point.

TEMPERATURE

The ambient temperature to which the gauge will be subjected should not exceed 150°F. If higher temperatures are encountered the gauge must be isolated from the source of heat. The temperature of the media to which the gauge is subjected to is also critical. Gauges with phosphor bronze Bourdon tubes should not be subjected to process temperatures in excess of 150°F. Gauges with metal cases and either 316 stainless steel or monel bourdons can withstand higher process temperatures, but as temperature exceeds 150°F hardening of the gasketing and discoloration of the dial may occur. In addition, accuracy will be affected by approximately 1.5% per 100°F. Both 316 stainless steel and monel gauges in metal cases will withstand 750°F for short periods of time without rupture, but other parts of the gauge will be destroyed and calibration will be lost.

VIBRATION

If present, a glycerin filled gauge is recommended.

PULSATION

If present, a pressure snubber or throttle screw is recommended.

WARNING: Misuse, Including Excessive Pressure, Vibration, Pulsation, Temperature And Corrosion May Cause Failure That Can Result in Damage Or Injury.

We suggest that users of Pressure Gauges refer to American National Standard ASME B40.1 entitled "Gauges, Pressure And Vacuum Indicating Dial Type – Elastic Element" for guidance in Gauge selection. This document may be obtained from American Society of Mechanical Engineers (ASME) United Engineering Center, 345 East 47th Street, New York, N.Y. 10017.

TEST & DIGITAL GAUGES

Test Gauges	6
Digital Gauges	7

Test Gauges ±0.25% of Span Accuracy

STANDARD FEATURES

Movement: Precision design, stainless steel rotary gear type. Wear-resistant, and virtually frictionless for long, accurate service.

Dial & Pointer: Mirrored dial and balanced knife-edge aluminum pointer permits reading without parallax error. Dial surface is white, with black numerals and graduations in a full 270° arc. Graduation lines are same width as the knife edge on pointer.

Dial Sizes: 4½", 6"

Connection Location: ¼ or ½ male NPT

Case: Choice of two black enameled die cast aluminum cases, solid front, safety type depending on connection.

Style 4: Back flanged type, bayonet ring, for surface or direct mounting. Bottom connected.

Style 6: Hinged front flush mount type, back connected.

Test Gauges are designed specifically for periodic bench testing and recalibration of production type gauges. They are also recommended for use in test cells such as on research projects, and as portable instruments for field inspectors and traveling engineers. Test gauges are not suggested for continuous duty in service installations.

TA16 ⁽²⁾	Tube, Brass Socket	6"
TA24	K Monel Tube, and Socket	4½"
TA26		6"

NOTES:

(1) The accuracy of measurement is influenced by the ambient temperature. The Weksler test gauge is calibrated to be accurate to within ¼ of 1% of full scale range at 77°F. (25°C). Using the gauge in ambient temperatures other than this requires the application of a correction of 0.02% of the indicated pressure for each 1°F. The correction is minus if the temperature is higher and plus if lowe than 77°F.

(2) 0/400 psi maximum range.

(3) Refer to page 26 for case dimensions.

General Purpose Digital Gauge Type WDG4251L $\pm\frac{1}{2}\%$ of Span Terminal Point Accuracy

STANDARD FEATURES

The Weksler WDG4251L offers 0.5% of span accuracy, while the stainless steel sensor and socket make this product suitable not only for dry air applications but for other media as well.

This product offers selectable units of measure so rather than purchasing one gauge for each unit of measure required, the solution is one gauge for multiple units of measure.

The WDG4251L is standard with many features not offered, or offered only as options, on competitor's digital gauge products, such as peak hold and 5 digit display. When compared to mechanical gauges the WDG4251L offers overall enhanced value.

- Enhanced value versus mechanical gauges
- No-nonsense accuracy – $\pm 0.5\%$ full scale accuracy
- Easy-to-read – 5 digit display with .48" character size, backlite display feature to enhance visibility
- Versatile – nine engineering units and stainless steel sensor suitable for a variety of applications
- Standard features – max.-pressure indication; ranges from vacuum to 20,000 psi, including compound
- Competitively priced
- IP65

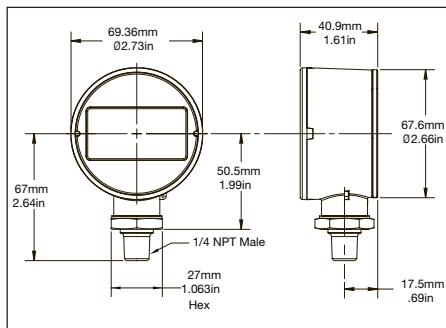

PRODUCT SPECIFICATIONS

Type no.:	WDG4251L
Accuracy:	$\pm 0.5\%$ of span
Case Size:	2½"
Case Material:	Polycarbonate
Wetted Parts:	17-4 PH stainless steel sensor; 316L stainless steel socket
Socket Size:	¼ NPT
Connection:	Lower
Ranges:	Vac. thru 20,000 psi (see engineering units below for other units of measurement)
Battery:	Two AA alkaline batteries; 2000 hours battery life
Overpressure:	
Proof Pressure:	Vac – 2,000: 200%
% of Span	3,000 – 5,000: 150%
	7,500 – 20,000: 120%
Burst Pressure:	Vac – 2,000: 800%
% of Span	3,000 – 5,000: 500%
	7,500 – 20,000: 300%
Cycle Life:	10 million cycles
Vibration:	MIL-STD-202G, Method 201A
Shock:	MIL-STD-202G, Method 213B, Test Condition K
Operating Temp.:	-4 °F to 140 °F, (-20 °C to 60 °C) ambient temp.; -4 °F to 176 °F, (-20 °C to 80 °C) process media temp
Storage Temp.:	Batteries Installed: -4°F to 140°F, (-20°C to 60°C) Batteries Removed: -4°F to 176°F, (-20°C to 80°C)
Temp. Coef.:	0.04%/°F (-20 °F to 180 °F) zero and span Reference Temp. 70 °F
Update Rate:	1Hz, 2Hz, 4Hz
Agency Approvals:	CE/UKCA, UL & cUL
Packaging:	Individual carton

Regal Industrial Gauge
±1.0% of Span Accuracy
3½" Dial Size

STANDARD FEATURES

Available in 3½" dial sizes, Regal pressure gauges are liquid fillable and field convertible for panel mounting. Both zero and span adjustments are standard. The gauge is available dry, liquid-filled, weatherproof or hermetically sealed.

- Designed for safety and long life
- All stainless, all-welded construction for long life
- ASME Grade 1A, ±1% accuracy of span.
- No stop pin to mask false zero reading – ensures safety and process control
- Bourdon tube, see table below
- Socket, see table below

1. Basic 4-digit Catalog No. RV14 _____
2. Case Style Code "4" (only case available) _____
3. Range Code From Range Tables Above _____
4. Thread Size: 4 = ¼ Npt Male (only thread size available) _____
5. Connection Location: L = Lower (Bottom) _____
6. Dial Color: W = White _____

**Low Pressure Gauges –
Bellows Type
±2-1-2% of Span Accuracy
4½" Dial Size**

STANDARD FEATURES

Movement: Bronze
Pointer: Balanced Slotted adjustable
Dial: White enameled aluminum. Black graduations and numerals
Thread Size: ¼ male NPT; ½ male NPT
Connection Location: Lower or Rear (back)
Case: Style "2" polypropylene safety suitable for direct or surface mounting.

Ideal for applications under 15 psi.

NOTES:

- Regal Low Pressure Gauges are calibrated in accordance with ASME B40.1 Grade A ($\pm 1\%$ middle third). See page 4 of this catalog for further reference to ASME B40.1.

Snubbers	34
Gauge Cocks, Needle Valves, Siphons	35

THROTTLING DEVICES

A throttling device should be used when a pressure gauge is subjected to rapid pressure fluctuations, which make the gauge difficult to read because of rapid pointer movement. Such a device reduces pressure impact, slows the speed and range of pointer movement, and prolongs gauge life.

Throttling effect is obtained by installing a restricting orifice between the gauge socket connection and the bourdon tube. Several types are available: throttle screws, pressure snubbers, pulsation dampeners.

Severe service applications are characterized by the presence of significant levels of pressure pulsation and/or vibration. Gauges should be protected from severe pressure pulsation by the inclusion of a dampener such as a throttle plug/screw or porous metal snubber. If the pulsation is extreme, a liquid-filled gauge, with dampener, should be used. A liquid-filled gauge will also last significantly longer than a comparable dry gauge when vibration is present. If the vibration levels are extreme, the only solution may be to remotely mount the gauge away from the source of vibration. In that case capillary tubing may be used to connect the gauge to the pressure source.

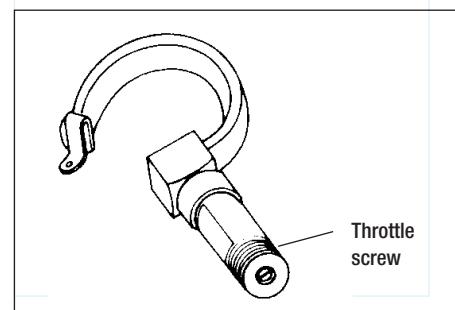

THROTTLE SCREWS

The simplest means of providing a restriction in the socket, a throttle screw, should be ordered with the gauge. Threaded or pressed into an instrument socket, the throttle screw orifice selected is based on the viscosity of the pressure fluid, rapidity of pressure fluctuations, and the amount of dampening effect desired.

A smaller orifice should be used for

low viscosities, high frequencies, high pressure and reduced pointer amplitude. To accommodate these variables, throttle screws are available in these sizes: 0.0135, 0.020, 0.031, 0.040, and 0.070 inches, in brass and stainless steel.

When orifice size or service condition is not specified, a 0.020-inch orifice will be supplied on Royal pressure gauges 0.0135, on 3½" Regal Gauges.

STATIONARY RED SET HAND

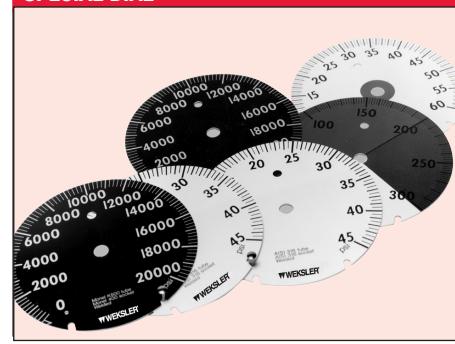

Stationary Red Set Hand
to indicate a specific pressure. Ring must be removed to move the hand.

OVERLOAD STOP

Overload Stop
to protect gauge system against extreme overpressure.

SPECIAL DIAL

ELECTRIC WARNING CONTACTS

The electric contact feature is a switching mechanism actuated by the indicating pointer. Switch points are adjustable and can be set throughout the 270° arc. Contacts are used to activate alarms and relays. (Not recommended for continuous switching). The Weksler electric contact is an ideal accessory to turn on a signal light, sound an alarm, or operate a pump or valve. The contacts can easily be set so that a circuit can be closed or opened at a desired pressure. Settings can be easily made in the field without removing the instrument from service. Contact adjustment is made externally with a removable key to make the instrument virtually tamper proof. Contacts are equipped with adjustable magnets to eliminate chatter caused by vibration. A plug-in connector with five feet of electrical cable is standard.

STANDARD FEATURES

- High impact polycarbonate enclosure for ambient temperature up to 150°F
- Full scale contact adjustment from front of enclosure
- Available on ranges 30 psi and up
- Magnetically assisted, silver alloy contact
- Accuracy $\pm 2\%$ of scale arc (add to instrument accuracy)
- Rated for $\frac{1}{4}$ amp. 110 volt AC non-inductive load
- Available in: 4 $\frac{1}{2}$ " case styles#2*, #4, #6, "A" 6" case styles#2, #4, #6, "A"

Model	Code	Contact arrangements
2265	XED	High and low contact
	XEE	Double high contact
	XEF	Double low contact
	XEG	"OFF" at low and high, and "ON" in between

* Style case #2 with lower connect comes with DIN Connection. No cable, mating connector available at extra charge.

Indicating accuracy of Royal Gauge, above 300 psi with contact:
 Pointer not carrying contact – 1.0%.
 Pointer carrying contact – 1.5%.
 For ranges below 30 psi, add an additional $\frac{1}{2}\%$ to indicating accuracies.

TEST GAUGE CARRYING CASE

This rugged blow-molded high-density polyethylene carrying case accommodates the standard 4 $\frac{1}{2}$, 6 & 8 $\frac{1}{2}$ Regal analog test gauges. It accepts both lower and back connect gauges. A foam insert protects the gauge when not in use. Type No. 2505.

Ring Wrench – 6"

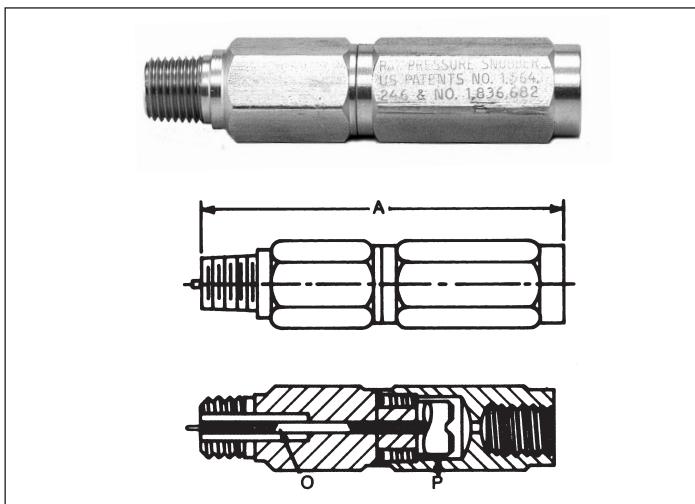

(For installing front threaded rings in 6" #4 aluminum safety cases)

FILTER TYPE

Filter Type: Snubbing element consists of a $\frac{3}{8}$ " diameter x $\frac{1}{8}$ " thick Micro Metallic stainless steel filter. When placed in the line just before the pressure gauge, the gauge pointer moves across the scale at a rate which is proportional to the pressure differential across the snubber element.

TYPE NUMBER	GAS OR LIQUID IN PIPE LINE	PRESSURE RANGE	CONNECTION	MATERIAL

SW 42	Water-Light Oil	5,000 psi	$\frac{1}{4}$ NPT	SS
SW 43	Heavy Oil			
A05D	Heavy Oil			
A05E	Water Light Oil	15,000 psi	$\frac{1}{2}$ NPT	SS

PISTON TYPE

Piston Type: Shocks and pulsations are absorbed in the doughnut-shaped orifice (O) formed by the piston (P) in the tube. As the piston moves up and down with the pulsation, it automatically clears away any sediment or pipe scale that would clog a simple orifice or needle valve.

Each snubber is furnished with three pistons. The snubbing may be changed to suit individual installations by changing pistons. By using the proper piston, any of the listed snubbers can be made to operate satisfactorily from vacuum to its maximum rated pressure on any fluid compatible with the body material. These snubbers may be installed vertically, horizontally, inverted, or at any angle.

TYPE NUMBER	GAS OR LINED IN PIPE LINE	PRESSURE RANGE LBS.	PIPE SIZE AND LENGTH	MATERIAL
RS1	Air, water, steam, etc.	0-3000	$\frac{1}{4}$ NPT	Brass
RS7	Thin corrosive liquid, gases		A = $3\frac{1}{2}$ "	SS
RS8	Thick corrosive liquids	0-5,000		Brass
RS6	Oil, water, etc.		$\frac{1}{2}$ NPT	
RS9	Thin or thick corrosive	0-10,000	A = $3\frac{5}{8}$ "	SS

ADJUSTABLE SNUBBER**Adjustable Snubber**

The Universal Adjustable Snubber has a ball check cut-off to block line surges, shock waves and fluid hammer; and an adjustable fine thread choke valve to tune out line pulsations. The combination of the ball cut-off and a tunable choke valve makes it an all-purpose, universal Snubber that is used on low displacement instruments such as bourdon tube gauges which require heavy dampening; and with high displacement instruments such as diaphragm, piston and bellows operated gauges, recorders and controllers, which require moderate to heavy dampening.

The adjustable choke valve is also used as a positive shut-off valve, to isolate the gauge or instrument, for servicing or replacement.

The operation of the Adjustable Snubber cut-off ball and the choke valve is shown in the chart. The cut-off ball blocks and clamps off shock and hammer transients in the line, which are above the normal pressure level in the system. The choke valve throttles and dampens out pulsations and cyclic pressure waves, and may be adjusted to dampen out to any level desired to prevent pointer oscillation on gauges, chart painting on recorders, instability in controllers or, damage to instruments, generally.

NOTE: The adjusting screw, ball and ball retainer are Stainless Steel, Buna N Seals are standard. Teflon, Viton and Butyl Seals are available.

BAR STOCK NEEDLE VALVES

These valves are used primarily to closely regulate fine flow. However, they may be used as a throttling device on lines where rapid and excessively pulsating pressures would tend to effect the gauge performance or mechanism.

TYPE NO.	SIZE	MATERIAL	PRESSURE & TEMP. RATING
BBV4	1/4 NPT	Brass: For oil, water, gas, etc.	600 psi @ 300°F
SSV4	1/4 NPT	303 Stainless Steel: For oil, water, gas, etc.	5000 psi @ 500°F
AV32	1/2 NPT	Bronze: For oil, water, gas, etc.	500 psi @ 150°F
AV44	1/4 NPT	Carbon Steel: Parkerized and Parcolaced, for resistance to corrosion	475 psi @ 1,000°F 550 psi @ 900°F 600 psi @ 850°F 10,000 psi @ 150°F
AV74	1/4 NPT	316 Stainless Steel provides greatest overall resistance to corrosion; very good for sub-zero service.	4,000 psi @ 150°F

SIPHONS

When a gauge is to be used for steam pressures, a siphon filled with water is recommended between the line and gauge to prevent high temperature steam from entering the gauge bourdon tube.

TYPE NO.	SIZE	SIPHON MATERIAL	CAPACITY
A03I	1/4 NPT	Iron (Schedule 40)	500 psi and 400°F
A03B		Brass	250 psi and 400°F
CPS4		Seamless Steel, extra heavy (Schedule 80)	1,000 psi and 850°F
CPSS4	Seamless Stainless Steel XH (Schedule 80)	2,000 psi and 1000°F	
CPS2	1/2 NPT	Steel (Schedule 80)	1,000 psi and 850°F
CPSS2		Seamless Stainless Steel XH (Schedule 80)	2,000 psi and 1000°F

Dry Gauges, Steel Case, Bronze Tube, Brass Socket, $\pm 3\text{-}2\text{-}3\%$ of Span Accuracy

STANDARD FEATURES

- Available in $1\frac{1}{2}$ ", 2", $2\frac{1}{2}$ " and $3\frac{1}{2}$ " sizes
- Black finish steel case and ring with plastic window
- Panel gauge case is black finish steel with studs and chrome-plated ring.
- Panel mount gauges available in $1\frac{1}{2}$ ", 2" and $2\frac{1}{2}$ " sizes, contact factory, NA for all models.
- $\frac{1}{8}$ NPT lower and back connection available
 $1\frac{1}{2}$ " size; $\frac{1}{4}$ NPT lower and back connection available in 2" and $2\frac{1}{2}$ " sizes; $\frac{1}{4}$ NPT lower connection available in $3\frac{1}{2}$ " size
- Dual scale dials with bar/kPa in blue (inner scale); psi in black (outer scale); on white background

STANDARD FEATURES

- 4 1/2" diameter
- Corrosion Resistant Stainless Steel Case and Ring, Plastic Lens.
- Zero adjusting screw.
- Soft soldered phosphor bronze tube with brass socket. Suitable for steam, water, air, oil, gas or any medium not corrosive to copper alloys.
- Bronze/brass movement.
- Easy to read dial; white background with bold black numerals and graduations, 270° arc.
- 1/4 NPT bottom connection only.

BIMETAL THERMOMETERS

Introduction	45
Adjustable Angle.....	46
3" Dial Size – Rigid Forms.....	47
5" Dial Size – Rigid Forms.....	48
3" Dial Size – Heavy Duty.....	49
Pocket Bimetal.....	50
Standard Threaded Thermowell.....	51

RANGE

Standard Farenheit and Celsius ranges have been estblished to encompass all normal temperature measurement requirements. A thermometer can be used at an operating temperature anywhere throughout its range. Although no bimetal thermometer should be exposed continuously to a process temperature over 800 °F.

DIAL SIZE

Select a dial size that allows you to comfortably read the dial from the normal distance when installed.

ACCURACY

All Weksler BiMetal Thermometers have an accuracy of $\pm 1\%$ of span. For accurate readings stem must be immersed at least 2 inches in liquids and 4 inches in gases.

UNDER/OVER RANGE PROTECTION

Temporary exposure to temperatures under or over 50% of the full-scale range will not impair accuracy (up to 500°F or 260°C maximum).

CASE ASSEMBLY

The case, bezel, stem and fittings are stainless steel (300 series). The head assembly is sealed to exclude dirt, dust and moisture on 3" and 5" dial sizes, all joints are welded.

DIALS

Dials are white with clear black graduations and numerals and are easy to read.

FACE

A gasketed glass window is standard on 3" and 5" dial sizes. Where breakage is a concern, a plastic or shatterproof glass window is optional at extra cost. On 1" and 2" dial sizes a plastic window is standard (no options available). Plastic windows are not suitable where head temperature exceeds 150°F (65°C).

EXTERNAL ADJUSTMENT

An external adjustment at the rear of the 3" and 5" case permits adjustment at a specific point or pointer repositioning during calibration check.

VIBRATION AND SHOCK

If present, use of either a heavy duty bimetal or a remote mounted gas actuated thermometer is recommended.

HIGH PRESSURE OR CORROSIVE APPLICATIONS

In these applications, use of a separable thermowell is recommended. In addition to protecting the thermometer, thermowells facilitate removal of the thermometer without having to shut down the system.

Adjustable Angle Type 3" and 5" Dial Size

STANDARD FEATURES

- All Stainless Steel Construction
- External Recalibration Adjustment
- White dial with black markings
- Accuracy $\pm 1\%$ of Span
- Gasketed Glass Face
- Case is sealed to exclude dirt, dust and moisture
- 3" and 5" dial sizes
- Angularly adjustable frame permits positioning of dial to accommodate viewing requirements

¾"	1.125"	0.50"	0.625"
1"	1.375"	0.50"	0.625"

THERMOWELL LEGEND

- I - Instrument connection
- P - Process connection
- T - Lag dimension when required
- B - Root OD
- E - Tip OD
- D - Bore diameter
- U - Insertion depth
- S - Instrument stem length or bore depth

Brass wells are not recommended for installations involving high pressures and/or temperatures over 400°F.
Brass cap and chain available to keep bore clean when not in use.

.260" bore standard. If .385" bore is required:

(1) Add the letter K at the end of the catalog no.;

(2) "Q" diameter is changed to 49/64" along entire length of insertion ("U" dimension).

For pressure – temperature rating use Table 1 on page 89.

NOTE: 2½" STEM THERMOMETERS USE SPECIAL LIMITED SPACE WELLS.

GLASS THERMOMETERS

Adjustable Angle Glass Thermometers.....	55
Dimensions, Thermowells.....	56

**Adjustable Angle Thermometer,
Mercury Free, Standard
Model A935AF5**

STANDARD FEATURES

- Mercury Free.
- Molded Valox® – V-shaped black case for ranges up to and including 300°F
- Die cast black aluminum V-shaped case for ranges above 300°F.
- Glass front excludes dust and dirt.
- White aluminum scale with bold black graduations and figures.
- Mercury Free blue liquid in glass with magnifying lens for easy readability.
- Accuracy is $\pm 1\%$ of span.
- Easy adjustment permits case and stem to be rotated 360°.
- 3½", 6", 9" & 12" stems available.
- 1¼"-18" NEF swivel nut.

OPTIONS

- Plastic window available for both 7" and 9" scale.
- Aluminum case available for low ranges (300°F and below).
